can form an N-containing three-, four-, fiveor six-membered heterocyclic ring; R is OH, F, Cl, Br, I, mesyloxy, tosyloxy, alkylcarbonyloxy of 1 to 4 C-atoms, or  $CH_2R_4$  is replaced by CHO;  $R_5$  is H or OH; or  $R_L$  and  $R_5$  together form an  $\frac{7}{17}O_{-7}$  bridge between the carbon atoms to which they are attached, and their non-toxic pharmaceutically acceptable salts and esters and mixtures thereof. Processes for the preparation of these compounds are described, and also novel pharmaceutical compositions containing them. These compounds exhibit valuable pharmacological properties as estrogenic, anti-estrogenic, and progestanic agents. They are also effective against oestrogen-dependent Certain compounds are useful as chemical intermediates for the preparation of pharmacologically active compounds of the invention.
